

# SHELBY WIDE BODY CONCEPT

The Shelby Super Snake Wide Body Concept was created by Shelby American to explore the performance envelope of the 2015+ Ford Mustang chassis. Unlike the previous generation Wide Body Super Snake, which was designed primarily for drag racing, this concept car has more grip on all four corners to deliver a competitive edge on the road course.

This concept was designed and hand built at Shelby American's facility in Las Vegas. New body panels were integrated into the "Lightning Blue" 50th Anniversary Shelby Super Snake to add approximately 4 inches to the rear track and 2.5 inches to the front. Shelby American added a fully adjustable coil over suspension system, bigger brakes, hardened wheel studs, stronger spindles and hubs, as well as a more aggressive wheel and tire package to put all 750 horsepower to the road.

Shelby American's roots began on the track and the Wide Body Super Snake is a road racer's dream. The package significantly changes the car's driving dynamics, giving the Super Snake more traction for later braking and earlier acceleration out of corners. It will deliver more communication to the driver and better absorb track imperfections, giving the Shelby razor sharp handling on most any surface.

The wide body Shelby Super Snake concept vehicle, the first from Shelby American in a decade, is a glimpse at the next generation track focused car. The concept car was unveiled to the public at the 5th Annual Carroll Shelby Tribute and Car Show on May 20, 2017. If the wide body concept goes into production, it will be available worldwide with the package registered as part of a vehicle in the official Shelby Registry.
